Hiring Manager
Climate Fieldview

Dear Hiring Manager,

Thank you for the opportunity to apply for the Software Engineering Intern role at Climate Fieldview. I am a sophomore at Purdue University currently pursuing a Bachelor of Science in Computer Science and Data Science. I have always been a strong believer in the power of data and the ability of software development to solve real-world problems. My fascination with computers and machine intelligence is deep rooted, has led me to pursue my current major. I believe that my specific skillset in Computer Programming with low-level languages such as C and Java and real-world work experience make me a strong candidate for this position.

I have a strong background in Machine Learning and Data Science, and I am proficient in Python, R, and SQL. I have experience working with large datasets involving data cleaning and data visualization using Pandas, Matplotlib, and Plotnine, and predictive modeling of machine learning and deep learning models such as Prod2Vec, Recurrent Neural Networks, and Convolutional Neural Networks with Farfetch as a part of The DataMine learning community as a Student Researcher.

I have a strong scripting background with python and am comfortable with using the linux command line from my experience as a part-time Student HPC Engineer at the Rosen Center of Advance Computing (RCAC) at Purdue University. I am also familiar with the software development life cycle like Agile and have experience working with version control systems such as Git. I have also worked extensively with the Azure suite of tools in building pipelines and workflows using Continuous Integration and Continuous Deployment stacks like Jenkins.

Thank you for your consideration, and I look forward to hearing from you soon.

Sincerely,
Dhruv Sujatha
